

# EXERCISE

## TO EVALUATE HYDROLOGIC ALTERATION INDUCED BY DAM REGULATION

1. *You have to select a dam in your country. Write a brief description of the dam and the river, and locate the reach directly affected*

---
2. *You have to obtain daily flow records, both in natural and altered regimes: (15 years at least)*

---
3. *You have to use IAHR methodology to quantify hydrologic alteration. You can use IAHRIS software and its outputs*

---
4. *You have to resume the most important ideas of your study.*

---
